is not a programming language per se, but rather a notation used for command definitions. It provides powerful script-like functions for objects, which can be used in a wide range

of applications. For example, the DIV object can be used in place of divide or the MULTIPLY command in place of multiply, allowing the user to enter a complex formula in a simple way. For example: `[[ADD = 10 DIV = 2 DIV = 8 -]]` This results in the number 16. The DIV command works in much the same way as the.NET command for an integer.

Modes and layers The mode-based drawing environment

in AutoCAD Crack Free Download is a user-interface technology, analogous to the selection state of the mouse pointer. In its normal state, the drawing system has a mode called In Draft View (or Immediate), which has a display like a hand-drawn drawing. To switch to a different mode, click on a button, for example 'Close', 'Convert to drawing', or 'Rasterize', or use the keyboard shortcut for the

desired mode (Alt-F11 or Ctrl-I). When the mode is switched to, the mode-specific user interface is shown. For example, when a DWG file is opened in a drawing environment with a DWG file extension, the drawing system uses a toolbox, palettes, and command line to control the drawing process. On the other hand, when a DGN file is opened in a drawing environment with a DGN file

extension, the drawing system uses a canvas, brushes, and primitives to control the drawing process. A mode change is an effect of the "level" at which the drawing system runs. For example, if a DWG file is opened, the drawing system may have a different "level" than when a DGN file is opened. AutoCAD enables the user to add, delete and modify modes and layers. The layer-based drawing

environment in AutoCAD is a user interface technology, analogous to the view state of the mouse pointer. In its normal state, the drawing system has a layer called Layer 1. To switch to a different layer, click on a button, for example 'Convert to drawing', or use the keyboard shortcut for the desired layer (Alt-F12 or Ctrl-J).
